Hitesh Jonnalagadda

PM @ Microsoft Security | Helping partners build & scale AI-powered security solutions | Columbia MBA
Greater Seattle Area

Summary

The best security products aren't the most secure. They're the ones partners can actually ship. I'm a Product Manager at Microsoft Security, working on the partner ecosystem behind the Microsoft Security Store, the marketplace where partners ship AI agents and AI-powered security solutions to enterprise customers worldwide. What I do drive product strategy and execution for partner-facing experiences across the Microsoft Security portfolio (Defender, Sentinel, Entra, Purview, Intune). I work with CSPs, MSSPs, and security ISVs to bring agentic AI to market, shaping the developer experience, APIs, and go-to-market motion that turn partner needs into products shipping at enterprise scale. What I bring to product management ▶ AI & agentic product thinking. I work at the frontier of how AI agents, large language models (LLMs), and Copilots reshape enterprise software. My focus: autonomous agents that detect, reason, and respond at machine speed, shipped responsibly with the trust and safety enterprise buyer's demand. ▶ 0-to-1 builder's instinct. Founding-team PM at two early-stage startups before Microsoft. I'm at my best in ambiguity: defining what to build, shipping the first version, and using customer signal to decide what comes next. ▶ Technical product management. I started in the trenches as a Site Reliability Engineer in Tokyo, on call for production cloud infrastructure. I write PRDs engineers want to build, and push back on the ones that won't ship. ▶ Customer-first lens. Columbia MBA with product and consulting work across Walmart, Christofle, and Ohanae. I start with the human problem, then earn the right to the feature. ▶ Global perspective. I've built across Tokyo, NYC, and Redmond. Conversational Japanese. Comfortable in cross-cultural, distributed teams. Where I focus AI product management · agentic AI · AI agents · generative AI (GenAI) · large language models (LLMs) · Copilots · trust and safety · responsible AI · enterprise software · enterprise security · cybersecurity · B2B SaaS · platform product management · 0-to-1 product · developer experience · APIs · marketplace and partner

ecosystems · cloud platforms · GTM strategy · technical product management · product-led growth. Always open to conversations with builders, AI and security leaders, and product folks rethinking how enterprise software gets shipped in the agentic era.

Experience

Microsoft

11 months

Product Manager

February 2026 - Present (4 months)

Redmond, WA

Security Solutions Advisor

July 2025 - February 2026 (8 months)

New York, United States

Walmart

MBA Product Manager

January 2025 - May 2025 (5 months)

Christofle

MBA Consultant

August 2024 - December 2024 (5 months)

New York, United States

CHRISTOFLE COMPANY PROFILE

Founded in Paris in 1830 by Charles Christofle, the brand is celebrated globally for its expertise in silver-plating techniques and timeless designs. Christofle has adorned the tables of royalty and elite clientele for nearly two centuries, establishing itself as a leader in luxury craftsmanship. Today, the brand offers an array of exquisite flatware, tableware, home décor, and accessories. With a commitment to combining heritage with contemporary innovation, Christofle continues to evolve, delivering elegance for modern living.

PROJECT OVERVIEW

Christofle has partnered with students from Columbia Business School to conduct a comprehensive research project aimed at unlocking innovative strategies for storytelling and brand activation in the U.S. market. The initiative seeks to address key questions about how the brand can inspire American

consumers, particularly younger demographics aged 25-35, to incorporate silver into their everyday lives. Students explored best practices in luxury customer engagement and immersive brand experiences by conducting in-store mystery shopping, digital assessments, and competitor analysis.

Ohanae

MBA Product Manager

February 2024 - May 2024 (4 months)

New York, United States

Crafted product strategy recommendations for a NYC-based fintech platform's checkout experience by analyzing customer journeys to identify conversion bottlenecks and delivering actionable technical solutions to engineering leadership.

Yoko Street

Product Manager

January 2023 - May 2024 (1 year 5 months)

United States

Led the Product Development efforts as a key member of the founding team at Yoko Street, successfully executing multiple Product Launches in the F&B space within our first year. My role involved comprehensive Product Management to ensure alignment with market needs and company goals.

- Directed product strategy and launches at Yoko Street (F&B startup) as a founding team member, leveraging customer research to validate market fit and shape product roadmap through iterative development
- Enhanced user experience through the implementation of structured feedback loops and support workflow optimization, driving an 80% improvement in customer satisfaction and sustained user retention growth
- Led end-to-end product development utilizing user research insights and data-driven prioritization frameworks, accelerating feature delivery while ensuring strong product-market fit

Oisix ra daichi

4 years 3 months

Founding Team

January 2023 - December 2023 (1 year)

United States

Bridging Cultures through Food - Global Venture

- Orchestrated business and product strategy that resulted in 800+ customer acquisitions in the first quarter through targeted Google Ads and A/B testing.
- Spearheaded a cross-functional team, aligning the company's mission to provide an authentic Japanese-American dining experience.
- Analyzed insights from 30+ user interviews to refine feature prioritization, leading to a 25% customer retention rate and a 10% increase in conversions.
- Employed analytics to drive a digital strategy that boosted subscription rates by 48% and elevated customer engagement by 15% within seven months.

Senior Site Reliability Engineer

January 2022 - February 2023 (1 year 2 months)

Tokyo, Japan

- Led a strategic overhaul of Hong Kong division's infrastructure, improving system uptime by 30% and cutting incident response time by 40%.
- Partnered with global teams to implement SRE best practices, resulting in a 25% improvement in system performance.
- Orchestrated successful disaster recovery mock tests, achieving a 100% system restoration rate.

Site Reliability Engineer

October 2019 - December 2021 (2 years 3 months)

Tokyo, Japan

- Spearheaded initiatives to tackle complex operational issues, leveraging a mix of proprietary and third-party tools, leading to significant enhancements in system reliability and user satisfaction.
- Presented comprehensive reports on critical performance metrics to executive leadership, directly influencing key strategic decisions and operational improvements.
- Designed and implemented real-time monitoring dashboards, resulting in a company-wide adoption and a notable 38% boost in operational efficiency through proactive issue resolution.
- Orchestrated Corporate Social Responsibility (CSR) projects aimed at improving social conditions in African nations, successfully securing increased corporate funding and support for these vital initiatives, thereby elevating the company's global social impact.

Jocata

Product Intern (Machine Learning)

January 2019 - March 2019 (3 months)

Hyderabad, Telangana, India

- Led the development of an innovative machine-learning tool for automated data extraction in financial documents.
- Achieved a stellar 99% accuracy rate in document type and field identification. This technology was a game-changer for our clients, with over 20 major financial institutions in India adopting it, leading to an estimated \$250K uplift in annual revenue.

University of Florida

Summer Research Internship

July 2018 - August 2018 (2 months)

Gainesville, Florida

Worked on a crucial project aimed at identifying and classifying space debris, a significant risk for ongoing space missions. Utilized machine learning to analyze satellite imagery and successfully developed a unique algorithm to classify various satellites and their components. Our approach yielded a successful proof-of-concept through the use of a Tabular Nearest Neighbor Encoding (TNE) classifier, opening avenues for future research and improvements.

T-Hub Hyderabad

Information Science Internship

May 2018 - June 2018 (2 months)

Gachibowli, Hyderabad

Initiated and successfully launched an events page to boost community engagement and participation for startups in the incubator. Also developed a chatbot to streamline customer queries and offer real-time assistance, resulting in improved customer satisfaction and increased engagement.

Tech Mahindra

Research And Development Intern

December 2017 - May 2018 (6 months)

Hyderabad, Telangana, India

Developed a virtual surveillance monitoring system using OpenCV modules, enhancing the system's capability to detect and track movements for improved security.

IIIT Hyderabad

Research Internship

May 2017 - June 2017 (2 months)

Hyderabad, Telangana, India

Utilized machine learning algorithms to predict passenger survival rates based on historical data. Achieved a top-5 global ranking in the Kaggle competition dedicated to this predictive analysis.

Education

Columbia Business School

Master of Business Administration - MBA, Strategy, Technology, and Operations · (2024 - 2025)

The Tuck School of Business at Dartmouth

Business Bridge Program, General Management · (June 2022 - July 2022)

Mahindra University

Bachelor of Technology (BTech), Computer Science · (June 2015 - May 2019)

Indian Institute of Technology (Banaras Hindu University), Varanasi

Bachelor of Technology - Dropout, Biochemical Engineering & Biotechnology · (2015)
